¹ Where changes in boundary have occurred as a result of the world war estimates have been adjusted to correspond with the area within the post-war boundaries.² Four-year average.³ One year only.⁴ The estimate for the five-year period 1909–1913 given in this table is somewhat larger than the figures obtained by averaging those five years in Table 14. This is because in the detailed table estimates for warring countries are for postwar boundaries, whereas in Table 14 they are for prewar territory. As a result, in excluding Russia, which lost territory in the war, a smaller area is excluded in the detailed table than in Table 14.⁵ Excluding Turkestan and Transcansia.⁶ Three-year average.

Division of Statistical and Historical Research.

¹ The consumption figures in this column were obtained by a survey in 1911 by the Bureau of Crop Estimates.

² The figures in this column shown for the individual States were computed on the ratio between the United States consumption in 1911 (5.31 bushels) and the per capita disappearance during the five years July, 1920-June 30, 1925 (4.70 bushels). The average disappearance for the latter period was 88.53 per cent of the 1911 disappearance.

³ The seed requirements are based on the spring acreage of 1925 and the 1925 fall sowing according to the December, 1925, estimates. The rate of seeding in each State was applied to the acreage in that State.

¹ Compiled from the annual reports of the Chicago Board of Trade to December, 1922. January, 1923, to date from the Chicago Daily Trade Bulletin. Reported on the Saturday nearest the first of the month.² The Chicago Board of Trade "visible" includes grain stored east of the Rockies only. It covers 22 interior and seaboard points of large accumulation and grain in transit by canals and lakes.³ From the Chicago Daily Trade Bulletin.⁴ Compiled from Bradstreet's. Includes grain stored at approximately fifty interior and seaboard points of accumulation and grain in transit by canals and lakes; also Pacific coast stocks at Portland, Tacoma, and Seattle. Reported on the Saturday nearest the first of the month.

Division of Statistical and Historical Research for estimated production by classes; Grain Division for inspections of United States wheat for export.

¹ The spring and winter wheats listed do not include the spring and winter in the white wheats. Production estimates are based on the estimate of percentage classification by States as reported for 1920 and 1923 to the Division of Crop and Livestock Estimates; the percentages for 1921 and 1922 were interpolated from the 1920 and 1923 percentages. The estimated production for 1925 is based on 1923 percentages, and is subject to revision.

² White wheat in the Pacific Northwest region consists of both spring and winter wheat; no attempt has been made to classify this wheat as other than white wheat, part of which is spring and part winter.

³ From July 1, 1921, to June 30, 1923, 70 per cent of the exports of mixed wheat is estimated as durum.

⁴ Prior to July 1, 1922, practically all wheat exported from the Pacific coast was shipped on the basis of "Portland (Oreg.) Chamber of Commerce type sample." Since July 1, 1922, all wheat exported from the Pacific coast has been inspected on the basis of Federal grades and classes.

⁵ Exports of wheat other than reported as "Federal inspected."

Division of Statistical and Historical Research. Official sources and International Institute of Agriculture except as otherwise stated. Production as reported is for the calendar year in the Northern Hemisphere and the succeeding harvest in the Southern Hemisphere.

¹ Where changes in boundary have occurred averages are estimates of production within present boundaries.

² Estimated on basis of acreage and average yield of 8.9 bushels per acre.

³ Four-year average.

⁴ Excluding Turkestan and Transcaucasia.

⁵ The estimate for the five-year period 1909–1913 given in this table is somewhat larger than the figure obtained by averaging those five years in Table 52. This is because in the detailed table estimates for warring countries are for postwar boundaries, whereas in Table 52 they are for pre-war territory. As a result, in excluding Russia, which lost territory in the war, a smaller area is excluded in the detailed table than in Table 52.

⁶ Excluding Transcaucasia.

⁷ One year only.

⁸ Excludes a few minor producing countries which do not enter into world trade or for which no statistics are available.

Division of Statistical and Historical Research. Official sources and International Institute of Agriculture unless otherwise stated.

Acreage given is for crops harvested during the calendar year in the Northern Hemisphere and the succeeding harvest in the Southern Hemisphere.

¹ Where changes in boundaries have occurred as a result of the World War estimates have been adjusted to correspond with the area within the post-war boundaries.

² One year only.

³ Four-year average.

⁴ Two-year average.

⁵ Excludes a few minor producing countries which do not enter into world trade and for which no production statistics are available.

Division of Statistical and Historical Research. Official sources and International Institute of Agriculture except as otherwise stated. Production as reported is for the calendar year in the Northern Hemisphere and the succeeding harvest in the Southern Hemisphere.

¹ Two year average.

² One year only.

³ Four-year average.

⁴ The estimate for the five-year period 1909-1913 given in this table is somewhat larger than the figure obtained by averaging those five years in Table 67. This is because in the detailed table estimates for warring countries are for post-war boundaries, whereas in Table 67 they are for pre-war territory. As a result, in excluding Russia, which lost territory in the war a smaller area is excluded in the detailed table than in Table 67.

⁵ Includes some sorghum.

⁶ Excludes China and a few minor producing countries which do not enter into world trade and for which no production statistics are available.

TABLE 67.—*Corn: World production, 1909-1925*

Including Russia.....	4,480,000	3,711,000	4,352,000	4,184,000	4,661,000

Division of Statistical and Historical Research. Official sources and International Institute of Agriculture, except as otherwise stated. Production as reported is for the calendar year in the Northern Hemisphere and the succeeding harvest in the Southern Hemisphere.

¹ One year only.

² Four-year average.

³ The estimate for the five-year period 1909–1913 given in this table is somewhat larger than the figure obtained by averaging those five years in Table 91. This is because in the detailed table estimates for war-ravaged countries are for postwar boundaries, whereas in Table 91 they are for pre-war territory. As a result, in excluding Russia, which lost territory in the war, a smaller area is excluded in the detailed table than in Table 91.

⁴ Excluding Turkestan and Transcaucasia.

⁵ Excluding Transcaucasia.

⁶ Three-year average.

⁷ Excluding native locations which produced 299,644 bushels in 1917–18 and 67,270 bushels in 1920–21.
⁸ Excludes a few minor producing countries which do not enter into world trade or for which no estimates are available.

Division of Statistical and Historical Research. Official sources and International Institute of Agriculture except as otherwise stated. Production as reported is for the calendar year in the Northern Hemisphere and the succeeding harvest in the Southern Hemisphere.

¹ Where changes in boundaries have occurred averages are estimates for territory in present boundaries.

² One year only.

³ Four-year average.

⁴ The estimate for the five-year period 1909-1913 given in this table is somewhat larger than the figure obtained by averaging those five years in Table 112. This is because in the detailed table estimates for warring countries are for postwar boundaries, whereas in Table 112 they are for pre-war territory. As a result in excluding Russia, which lost territory during the war, a smaller area is excluded in the detailed table than in Table 112.

⁵ Excluding Turkestan and Transcaucasia.

⁶ Excludes native locations which produced 38,550 bushels in 1917-18 and 29,057 bushels in 1920-21.

⁷ Two-year average.

⁸ Excludes a few minor producing countries which do not enter into world trade or for which no statistics are available.

Division of Statistical and Historical Research. Compiled from reports of the Bureau of Foreign and Domestic Commerce and Division of Crop and Livestock Estimates.

¹ Oil converted to seed on basis of 7½ pounds to a gallon and 2½ gallons of oil to the bushel.

² Preliminary.

³ Less than 500 bushels for the 6 months ended Dec. 31, 1922; not separately reported since that date.

⁴ Not separately reported.

⁵ Represents domestic oil only. Exports of "foreign" linseed oil not separately reported since December, 1922, but included with exports of "other vegetable oils" (foreign) n. e. s. Exports of "foreign" linseed oil for the 6 months ended Dec. 31, 1922, were the equivalent of 260 bushels of flaxseed.

Division of Crop and Livestock Estimates. Figures in italics are census returns.

¹ Based upon farm price Dec. 1.² Commerce and Navigation of United States, 1909-1918, and the June issue of Monthly Summaries of Foreign Commerce, 1919-1925. Domestic exports here include also shipments from the United States to Porto Rico and Hawaii; net imports are total imports minus reexports. Bushels are computed from pounds as reported in original by assuming 1 bushel of rough rice to yield 27½ pounds of cleaned rice.³ Preliminary.TABLE 145.—*Rice, rough: Acreage, production, and total farm value, by States, 1924 and 1925*

¹ Averages for European countries are estimates for the territory within present boundaries.² Three years only.³ One year only.⁴ Four years only.⁵ Less than 500 acres.⁶ Pre-war average.⁷ Two years only.⁸ Total acreage estimated from area under summer or main crop which was 91,000 acres this year compared with 231,000 in 1924. The acreage under this crop in 1924 was 90 per cent of the total acreage under rice in Egypt.⁹ Total acreage estimated from that under rice in Annam, Cambodia, Laos, Tonking, and Cochinchina which was estimated at 9,197,400 acres in 1925 compared with 9,064,000 in 1924. In 1924 the acreage in these provinces comprised 76.9 per cent of the acreage under rice in Indo-China.

Division of Statistical and Historical Research. Official sources and International Institute of Agriculture. Production figures in most cases are for crops harvested in the calendar year in the Northern Hemisphere and the succeeding harvest in the Southern Hemisphere.

¹ Averages for European countries are estimated for territory within present boundaries.

² Two years only.

³ One year only.

⁴ Total production estimated from production reported in Annam, Laos, Cochinchina and the first crop in Cambodia and Tonkin, aggregating 5,355,734,000 pounds in 1925 compared with 5,846,079,000 in 1924. In 1924 the production in these provinces amounted to 74.4 per cent of the total crop produced in Indo-China.

⁵ Production estimated by multiplying acreage by an average yield for years 1920–21 to 1923–24 for which years the Ministry of Lands and Agriculture gives official estimates of both area and production.

⁶ Unofficial.

⁷ Three-years only.

⁸ Rough estimate for nonirrigated crop also included in total.

⁹ Unofficial estimates of the Chinese crop are as follows: 70,219,000,000 pounds in 1917; 52,788,000,000 in 1920 and 50,666,000,000 in 1923.

Division of Statistical and Historical Research. The figures for each year include the crop harvested in the Northern Hemisphere within the calendar year and the following harvest in the Southern Hemisphere.

¹ Includes India, Japan, Java and Madura, Formosa, Italy, Spain, and Dutch Guiana.

² Revised figures based on additional information since the publication of the 1924 Yearbook of the United States Department of Agriculture due principally to changes in the figures for Java and Madura and Siam.

³ China would rank among the chief producing countries, but owing to lack of official statistics has been omitted.

⁴ Irrigated rice. The changes in the figures for Java and Madura from those previously reported are based on official information recently received as to the percentage of cleaned rice obtained from paddy and rough rice.

⁵ Estimated figures obtained by multiplying acreage under rice as classified for revenue purposes up to 1912 and acreage as reported by the Department of Land and Agriculture from 1912 on by an average yield for the years 1920–1923 for which years official estimates have been published of area, yield, and total production.

⁶ Estimated.

Division of Statistical and Historical Research. Official sources except where otherwise noted.
Mostly cleaned rice. Under rice is included paddy, unhulled, rough, cleaned, polished, broken and cargo rice, in addition to rice flour and meal. Rice bran is not included. Rough rice, or paddy, where specifically reported, has been reduced to terms of cleaned rice at the ratio of 162 pounds of rough or unhulled to 100 pounds of cleaned. "Rice, other than whole or cleaned rice," in the returns of the United Kingdom is not considered paddy, since the chief sources of supply indicate that it is practically all hulled rice. Cargo rice, a mixture of hulled and unhulled, is included without being reduced to terms of cleaned. Broken rice and rice flour and meal are taken without being reduced to terms of whole cleaned rice.

¹ Three-year average.

² Twelve months' sea-trade, three months' land-trade.

³ International Institute of Agriculture.

⁴ Java and Madura only.

⁵ Two-year average.

⁶ One year only.

Division of Crop and Livestock Estimates.

¹ The percentages shown are the percentages of the various apple crops reported by the growers to be of summer varieties, such as ordinarily go into consumption not later than early September, fall and early winter varieties not suitable for keeping later than Christmas; and later varieties, including those which can ordinarily be stored for winter use.

Cold Storage Report Section.

¹ All apples, except those packed in western-style boxes, are tabulated in terms of barrels, on the basis of 3 bushels to the barrel; since Oct. 1, 1923, apples packed in bushel baskets are also included in this tabulation. Three boxes are considered the equivalent of 1 barrel.

Division of Statistical and Historical Research. Compiled from Daily Market Report of Fruit and Vegetable Division. Average prices as shown are based on stock of good merchantable quality and condition, they are simple averages of daily range of selling prices. Since all varieties are included, these figures can be taken only as an index of the changes in the level of apple prices.

¹ Quotations began on Sept. 1 in 1920, 1922, 1923, 1925; Sept. 7, 1921; Sept. 2, 1924.

² Last reported quotations of seasons May 23, 1921; May 1, 1922; May 12, 1923, June 8, 1924; Apr. 15, 1925.

Division of Statistical and Historical Research. September, 1909, to May, 1920, compiled from the American Agriculturist, average of weekly range; subsequently, compiled from Daily Market Report of Fruit and Vegetable Division; simple average of daily range of selling prices. Since all varieties are included, these figures can be taken only as an index of the changes in the level of apple prices.

Division of Crop and Livestock Estimates.

¹ *Production*.—For Florida the estimates for 1919 and more recent years represent shipments by rail or boat. For other States the figures aim to include all fruit actually picked, however utilized, but do not include fruit which matured on the trees but was not picked because of freezing, dropping, or low prices. For California the figures relate to the crop produced from the bloom of the year shown, fruiting through the winter and through the spring and summer of the following year, being picked from Nov. 1 of the year shown to Oct. 31 of the following year. Fruit not picked till after the latter date is included with the crop of the following year. For other States, the estimates include fruit picked after about Sept. 1 of the year shown. For the crop of 1925 the estimates shown were based on prospects on Dec. 1, 1925, except where shown otherwise.

² Including tangerines.

³ Data from census reports.

⁴ Compiled from records of Division of Crop and Livestock Estimates.

⁵ Revised February, 1926.

⁶ Less than 500 boxes.

Division of Crops and Livestock Estimates.

¹ The figures shown are approximate only. They are intended to represent the numbers of citrus trees on farms and old enough to produce fruit in the year shown. The figures no doubt include some small trees producing a negligible quantity of fruit. The enumerators of the 1910 and 1920 censuses asked for orange trees and also for other subtropical fruits. In this table tangerine trees have been included with other orange trees. The enumerators of the 1925 census asked only for the number of orange trees, and the figures may include only part of the tangerine trees. In addition to the numbers shown there are in some sections a considerable number of trees on properties that were not listed as farms by the Census Bureau.

² Including tangerine trees.

³ Data from census reports.

⁴ From records of the Division of Crop and Livestock Estimates.

⁵ Less than 500 trees.

⁶ Preliminary report of 1925 census not yet available.

1925.....	4.67	-----	-----	-----	-----	-----	-----	-----

Division of Statistical and Historical Research. Compiled from New York Daily Fruit Reporter.

Monthly average obtained by taking simple average of reported averages of all sales of the following-named brands: Paul Neyron, Golden Cross, Glendora Heights, Pinnacle, Earlibest, and Big Tree. Includes all sizes. Yearly average weighted by number of sales reported during each month.

¹ The season usually begins in December, but in 1925 the season began in November, with an average price of \$7.03.

² Ten sales or less during month.

³ See footnotes to figures used in obtaining this average.

¹ To calculate the production of pears, peaches, apricots, and plums in bushels, multiply the production in tons by 2,000 (the number of pounds in a ton) and divide by 48, the usual number of pounds in a bushel.

² Dried basis. To calculate in terms of fresh fruit multiply the quantity of dried prunes produced by 2½.

³ The production shown includes a small quantity of prune varieties shipped fresh, but does not include prunes dried.

⁴ Dried basis. To calculate the approximate quantity of fresh grapes used for raisins multiply the production of raisins by 4.

⁵ For years prior to 1923 the quantity of raisins marketed fresh was small and has been included with other table grapes.

⁶ Representing the commercial crop year beginning Nov. 1 of the year shown; the numbers for 1925, for instance, represent the fruit that set during the season of 1925 and will be picked and marketed from Nov. 1, 1925, to Oct. 31, 1926.

Division of Statistical and Historical Research. Compiled from reports of Fruit and Vegetable Division. Shipments as shown in car lots include those by boat reduced to car-lot basis.

¹ Crop movement season for cabbage becomes important in the South in January and continues for 16 months ending in April with final shipments from northern points.

² Preliminary.

³ New York includes 1 car in May, 1923.

⁴ Figures for certain States include in the January shipments, cars moved in preceding calendar year as follows: 1920: Florida, 10 cars in December; Louisiana, 4 cars in December; Texas, 2 cars in November, 23 in December. 1921: Florida, 1 car in October, 1 in November, 13 in December; South Carolina, 2 cars in December; Texas, 25 cars in December. 1922: Alabama, 1 car in December; Florida, 15 cars in December; South Carolina, 1 car in November, 32 in December; Texas, 4 cars in November, 110 in December. 1923: Alabama, 3 cars in December; Florida, 19 cars in December; Louisiana, 2 cars in November, 13 in December; South Carolina, 11 cars in November, 152 in December; Texas, 22 cars in November, 39 in December. 1924: Florida, 72 cars in December; Louisiana, 1 car in November, 7 in December; South Carolina, 24 cars in November, 167 in December; Texas, 9 cars in November, 64 in December.

Division of Statistical and Historical Research. Compiled from Daily Market Report of Fruit and Vegetable Division. Average prices as shown are based on stock of good merchantable quality and condition; they are simple averages of daily range of selling prices. In some cases conversions have been made from larger to smaller units or vice versa, in order to obtain comparability.

† Unless otherwise stated, quotations are on bulk per ton sales.
 ‡ The season during which Danish cabbage prices are obtainable usually runs from October to March of the following year.

§ Sacked per ton delivered.
 ¶ Converted from hundred weight price.
 * Bulk per hundred weight.
 † Converted from ton price.
 ‡ Cash sales.

Division of Statistical and Historical Research. Compiled from reports of Fruit and Vegetable Division. Shipments as shown in car lots include those by boat reduced to car-lot basis.

¹ Includes honeydews and other miscellaneous melons not separately reported until 1923. The shipments of melons, other than cantaloupes, amounted in 1923 to 1,162 cars; in 1924, to 2,665; and in 1925, to 3,665.

² Crop-movement season extends from April 1 through November of a given year.

³ Preliminary.

⁴ Includes 1 car in December.

⁵ Includes 17 cars in December.

Division of Statistical and Historical Research. Compiled from Daily Market Report of Fruit and Vegetable Division.

Average prices as shown are based on stock of U. S. No. 1 grade; they are simple averages of daily range of selling prices. In some cases conversions have been made from larger to smaller units or vice versa, in order to obtain comparability.

¹ Quotations began Aug. 23, 1920; Aug. 22, 1921; Aug. 7, 1922; Aug. 14, 1923; Aug. 22, 1924; July 22, 1925.

² Last reported quotations of season June 11, 1921; June 14, 1922; May 29, 1923; June 4, 1924; June 10, 1925.

Division of Statistical and Historical Research. Compiled from reports of Fruit and Vegetable Division. Shipments as shown in car lots include those by boat reduced to car-lot basis.

¹ Crop movement season extends from April 1 of one year through July of the following year, except in Florida where the season begins in March.

² Preliminary.

³ Includes 8 cars in August, 1923.

⁴ Includes 1 car in February, 1922.

⁵ Includes 28 cars in February, 1925.

⁶ Includes 32 cars in March, 1921.

⁷ Includes 11 cars in March, 1925.

⁸ Includes 1 car in February, 1922, and 8 in August, 1923.

⁹ Includes 28 cars in February and 11 in March, 1925.

Division of Statistical and Historical Research. Compiled from Daily Market Report of Fruit and Vegetable Division. Average prices as shown are based on stock of U. S. No. 1 grade; they are simple averages of daily range of selling prices. In some cases conversions have been made from larger to smaller units or vice versa, in order to obtain comparability.

*Crop movement season extends from April of one year through May of the following year, with irregular quotations continuing through June and July.

¹Car-lot sales.

²Eight-day average.

³Bulk only.

Division of Statistical and Historical Research. Compiled from reports of Fruit and Vegetable Division. Shipments as shown in car lots include those by boat reduced to car-lot basis.

¹ Crop movement season extends from July 1 of one year through June of the following year.

² Preliminary.

³ Figures for certain States include shipments in July of succeeding crop year as follows: New Jersey—1920 15 cars; 1922, 4 cars; 1924, 4 cars; Arkansas—1921, 1 car; Kentucky—1921, 1 car; New Mexico—1921, 5 cars; Tennessee—1921, 17 cars; 1924, 3 cars.

⁴ Florida includes 2 cars in June, 1922.

Division of Statistical and Historical Research. Compiled from Daily Market Report of Fruit and Vegetable Division.

Average prices as shown are based on stock of good merchantable quality and condition; they are simple averages of daily range of selling prices. In some cases conversions have been made from larger to smaller units or vice versa, in order to obtain comparability.

¹ Quotations began Aug. 23, 1920 and 1921; Sept. 1, 1922; Sept. 18, 1923; Sept. 2, 1924; Aug. 25, 1925.

² Last reported quotations of season May 26, 1921 and 1922; May 4, 1923; April 15, 1924; April 3, 1925.

Division of Crop and Livestock Estimates.

¹ As reported by about 7,500 cotton growers, supplemented by records of State weighers, cooperative associations, and cotton dealers.

² Includes August.

³ Includes July.

Division of Statistical and Historical Research. Official sources except where otherwise noted. Bales of 500 pounds gross weight or 473 pounds net. The figures for cotton refer to ginned and unginned cotton and linters, but not to mill waste, cotton batting, scarto (Egyptian and Sudan). Wherever unginned cotton has been separately stated in the original reports it has been reduced to ginned cotton in this statement at the ratio of 3 pounds unginned to 1 pound ginned.

1 Less than 500 bales.

2 Year ended Dec. 31.

3 International Institute of Agriculture. 7

4 Eleven months.

5 Sea-trade only.

6 Three-year average.

Division of Crop and Livestock Estimates.

¹ Acreage and production of beets are credited to the State in which the beets are made into sugar. Year shown is that in which beets were grown. Sugar-making campaign extends into succeeding year.² The planted acreage is that covered by factory-contract agreements and understandings, all of which is not actually planted by growers. Therefore abandonment may not mean actual loss of acreage.³ Preliminary.

Division of Crop and Livestock Estimates. Figures for 1925 are preliminary.

¹ Acreage and production of beets are credited to the State in which the beets are made into sugar. Year shown is that in which beets were grown. Sugar-making campaign extends into succeeding year.

² Based upon weight of beets.

³ Percentage of sucrose (pure sucrose) in the total soluble solids of the beets.

⁴ Percentage of sucrose actually extracted by factories.

⁵ Percentage of sucrose (based upon weight of beets) remaining in molasses and pulp.

⁶ Preliminary.

Division of Statistical and Historical Research. See Table 405 for source of production figures. Trade figures, Bureau of Foreign and Domestic Commerce.

¹ In terms of raw sugar.

² Beet and cane sugar only.

³ Duty free. From Hawaii, Porto Rico, and the Philippine Islands (Virgin Islands included 1917 and subsequently).

⁴ No account taken of sugar imported in other forms. Imports from Philippine Islands excluded, re-exports deducted.

⁵ Shipments to Hawaii and Porto Rico included. Direct exports to foreign countries from Hawaii and Porto Rico excluded.

⁶ Sugar used in the manufacture of other commodities for export on which drawback was paid.

⁷ No account taken of stocks at beginning or end of the year.

¹ Averages for countries having changed boundaries are estimates for territory within present boundaries.

² Principal producing States.

³ Two year average.

⁴ One year only, 1912-13. According to statistics of the German sugar association, the 1912-13 acreage was higher than any other year with the exception of 1914-15.

⁵ Four-year average.

⁶ No sugar beets grown for sugar previous to 1918.

Division of Statistical and Historical Research

¹ Figures are for the crop years 1909-10 to 1925-26 for the countries in which the sugar harvesting season begins in the fall months and is completed during the following calendar year, except in the case of cane sugar producing countries where the season begins in May or June and is completed in the same calendar year. Production in these countries is for the calendar years 1909 to 1925

² The figures quoted are the production of gur, a low grade of sugar which is mostly consumed by the natives

³ All grades of sugar reduced to terms of head sugar.

Division of Statistical and Historical Research. Official sources and International Institute of Agriculture except as otherwise stated.

Figures are for the crop years 1909-10 to 1925-26 for the countries in which the sugar harvesting season begins in the fall months and is completed during the following calendar year, except in the case of cane-sugar producing countries where the season begins in May or June and is completed in the same calendar year. Production in these countries is for the calendar years 1909 to 1925.

¹ Unofficial estimate.

² Exclusive of production in minor production countries for which no data are available.

³ Too small to report.

¹² The figures quoted are the production of gur, a low grade of sugar which is mostly consumed by the natives. There are 23 modern factories in India which make sugar direct from cane. These factories produced 38,000 short tons refined sugar in 1924-25 as compared with 43,000 short tons in 1923-24. The decrease, according to the secretary of the sugar bureau, was due to inadequate supply of raw material and the higher price of gur, which induced the peasants to prefer making gur to selling cane to factories.

¹³ Three-year average.

Hay, Feed, and Seed Division.

¹ Imports of all seeds up to and including the fiscal year 1913, also of perennial and Italian rye grass and hairy vetch up to and including 1917, and sweet clover for all years, are based on information furnished by U. S. Customs Service. All other figures represent imports of seed permitted entry under the seed importation act.

² Less than 500 pounds.

³ Figures missing.

¹ Averages for European countries are estimates for territory within present boundaries.

² Two-year average.

³ Four-year average.

⁴ Year 1910 only. Census figure.

⁵ Unofficial.

⁶ One-year only.

⁷ Includes Asiatic Russia.

⁸ Estimate as reported by the Russian Bureau of Information. The figure for 1925 is a rough estimate based on a reported increase of 25 per cent over 1924.

¹ Averages for European countries are estimates for territory within present boundaries.

² 2-year average.

³ Unofficial estimate.

⁴ 3-year average.

⁵ 1 year only.

⁶ 4-year average.

⁷ Includes Asiatic Russia.

⁸ Incomplete data, yellow tobacco only. According to another source the total production of both yellow tobacco and makhorka in 1924 amounted to 43,335,000 pounds.

⁹ Rough estimate of annual production.

¹⁰ Lebanon only. According to the International Institute of Agriculture this district produced 1,102,000 pounds in 1922, 882,000 in 1923, and 1,587,000 pounds in 1924.

¹¹ Exclusive of Aleppo.

¹² Exclusive of Tonking.

TABLE 442.—Tobacco: Production in specified countries, average 1909–1913, annual 1922–1925.—Continued

Estimated world total exclusive of India and China ¹⁵	2,671,000	2,568,000	2,990,000	3,110,000	

Division of Statistical and Historical Research. Official sources and International Institute of Agriculture except as otherwise stated. Production figures are for the crop harvested in the calendar year in the Northern Hemisphere and the succeeding harvest in the Southern Hemisphere.

¹ 3-year average.² 1 year only.³ 1-year average.

¹³ The figures quoted here include a rough estimate of the crops produced by natives, on the basis of an average yield of 4 piculs per bouw (311 pounds per acre), as quoted by Trade Commissioner J. F. Van Wickel, Batavia, Java, to which is added the official estimate of production by Europeans.

¹⁴ Exclusive of Victoria.

¹⁵ No reliable data is available on production in India or China. The acreage devoted to tobacco in India would indicate a production next to the United States in the size of the crop. China is also of considerable importance.

Rumania ⁹		5,648	5,721	5,932	5,734	5,583		
Poland		8,351	8,132			8,800		
Lithuania		918	849	1,021	1,285	1,252		
Latvia	June	912	800	810	911	905	907	

¹ Average for 5-year period immediately preceding war if available, otherwise for any years within this period, except as otherwise stated. In countries having changed boundaries the figures are estimates for one year only of numbers within present boundaries.

² Revised estimates of Division of Crop and Livestock Estimates, 1921-1926. These figures are made on the basis of census figures of 1920 and 1925, of annual assessment data and other information. The estimates prepared in the Bureau of Animal Industry by adjustment of the census figures to a January 1 basis and including all animals in towns and villages as well as on farms and ranges are as follows: Average, 68,900; 1921, 67,200; 1922, 67,700; 1923, 68,900; 1924, 68,200; and 1925, 66,600.

³ Year 1902.

⁴ Year 1918.

⁵ Year 1908.

⁶ Year 1920.

⁷ Unofficial.

⁸ Year 1917.

⁹ Buffaloes included.

¹⁰ Year 1916.

¹¹ June, 1914.

¹² Numbers in rural communities only.

¹³ Year 1917.

¹⁴ Year 1906.

¹⁵ Estimated for present boundaries. The estimate for former boundaries on Apr. 6, 1918, is 6,239,741.

¹⁶ No census was made as of December, 1923, which estimate would have been considered as of January, 1924, in this table, as explained in the general note, so the figure for October, 1923, has been used.

Division of Statistical and Historical Research. Census returns are in italics; other returns in roman. All estimates for countries reporting as of December have been considered as of January of the following year.

⁶ Year 1920.

⁷ Buffaloes included.

⁸ Year 1916.

⁹ Year 1915.

¹⁰ Excludes southern territory where there were 15,580 cattle in 1923.

¹¹ In addition there were 832,163 buffaloes.

¹² Excludes Transcaucasia and Turkestan. The number in Turkestan and Azerbaijan (part of Transcaucasia) in 1920 amounted to 2,048,000.

Division of Statistical and Historical Research. Compiled from reports of the Bureau of Census.

¹In addition there were 377,957 heaves and 243,360 calves slaughtered on a custom basis in 1914, and 553,839 heaves and 387,692 calves for 1919. No corresponding data for 1909, 1921, or 1923.

²No data collected by the Bureau of Census for 1914, 1921, or 1923 on farm or retail slaughter.

³No data obtainable for retail slaughter in 1919.

⁴Including calves.

Division of Statistical and Historical Research

Figures prior to July, 1920, for good beef steers and prior to June, 1918 for calves, compiled from Chicago Drovers Journal Yearbook; subsequent figures compiled from data of the reporting service of the Division of Livestock, Meats, and Wool

¹ Bulk of sales 1,100 pounds up July 1, 1925 classification changed to 1,100-1,500 pounds.

² Simple average of monthly average prices.

Division of Statistical and Historical Research. Calculated from quotations in the Review of the River Plate. Prices prior to May, 1921, originally quoted on basis of price per head supplemented from 1916 by price per pound of dressed carcass weight. Calculations assume average dressed weight of 730 pounds or live weight of 1,259 pounds. Live-weight quotations per pound from May, 1924. Converted from Argentine currency at average monthly rate of exchange.

Division of Statistical and Historical Research. Inspected slaughter from reports of Bureau of Animal Industry. Weights and storage holdings from reports of the Cold Storage Report Section; receipts, shipments, and prices compiled from data of the reporting service of the Division of Livestock, Meats, and Wool, and number on farm from Division of Crop and Livestock Estimates. Exports and imports from Bureau of Foreign and Domestic Commerce.

¹ Figures do not check to total because of adjustment to thousands.

² Weighted average, not total.

³ Simple average, not total.

⁴ Including reexports.

⁵ At public stockyards.

Bureau of Home Economics. Figures are based on data published by Missouri and Illinois Agricultural Experiment Stations.

¹ Standard Chicago cuts were used. Except for slight differences, particularly in the fore quarter, these cuts correspond to the ones illustrated in U. S. Dept. Agr., Circ. 300, "Commercial Cuts of Meat." Figures refer to typical animals of each grade.

² Shoulder clod is included.

Bureau of Animal Industry.

¹ Accredited-herd work begun in 1917; area work, 1921.

² Includes area testing in units smaller than counties.

³ Testing in 1917 before work was organized by States.

¹ Average for 5-year period immediately preceding war if available, otherwise for any years within this period except as otherwise stated. In countries having changed boundaries the figures are estimates for one year only of numbers within present boundaries.

² Revised estimates of Division of Crop and Livestock Estimates, 1921-1926. These figures are made on the basis of census figures of 1920 and 1925, of annual assessment data and other information. The estimates prepared in the Bureau of Animal Industry by adjustment of the census figures to a Jan. 1 basis and including all animals in towns and villages as well as on farms and ranges are as follows: Average 5,300; 1921, 58,600; 1922, 60,900; 1923, 71,500; 1924, 69,100; 1925, 56,700.

³ Year 1902.

⁴ Year 1920.

⁵ Year 1908.

⁶ Year 1916.

⁷ June, 1914.

⁸ Number in rural communities.

⁹ September.

¹⁰ Year 1906.

¹¹ Year 1918.

¹² Estimated for present boundaries. The number within former boundaries on Apr. 6, 1918, amounted to 2,338,926.

¹³ No census was made in December, 1923, which estimate would have been considered as of January 1924, in this table as explained in the general note, so the figure for October, 1923, has been used.

¹⁴ Unofficial.

Division of Statistical and Historical Research. Census returns are in italics; other returns in roman. All estimates for countries reporting as of December have been considered as of January of the following year.

¹⁵ Year 1915.

¹⁶ Excludes Transcaucasia and Turkestan (part of Transcaucasia) in 1920 amounted to 102,000.

The number in Turkestan and Azerbaijan (part of Transcaucasia) in 1920 amounted to 102,000.

Division of Crop and Livestock Estimates Based on reports of about 140,000 farmers gathered in cooperation with Post Office Department through the rural mail carriers.
Periods covered Dec 1 to June 1 (spring), June 1 to Dec 1 (fall)

- 1 Total pigs saved divided by sows farrowed as reported by farmers
2 Intentions are as of the close of the preceding 6-months' period, for example, those for spring farrowing 1928 were intentions expressed as of Dec 1, 1925.
3 Total of 12 States immediately preceding, i. e. Ohio to Kansas.
4 Not including North Dakota.

Bureau of Animal Industry.

NOTE.—Owing to the emergency created by the outbreak of foot-and-mouth disease in Texas and California, it was necessary to assign many of the veterinarians from the hog-cholera force to the eradication of foot-and-mouth disease for a part of the year.

¹ Fractions denote veterinarians devoting a part of their time to the work.

¹ Average for 5 year period immediately preceding war if available; otherwise for any year within this period except as otherwise stated. In countries having changed boundaries the figures are estimates for one year only of numbers within present boundaries.

² Revised estimates of the Division of Crop and Livestock Estimates, 1921-1926. These figures are made on the basis of census figures of 1920 and 1921 of annual assessment data and other information. The estimates prepared in the Bureau of Animal Industry by adjustment of the census figures to a January 1 basis, and including all animals in towns and villages as well as on farms and ranges are as follows: Average, 58,900, 1921, 67,200, 1922, 67,700, 1923, 68,900, 1924, 68,200, and 1925, 66,600.

³ Year 1902.

⁴ Year 1916.

⁵ Year 1920.

⁶ Year 1908.

⁷ Year 1915.

⁸ June 1914.

⁹ Numbers in rural communities only.

¹⁰ September.

¹¹ Year 1906.

¹² Year 1918.

¹³ Estimated for present boundaries. The number in former boundaries on Apr. 6, 1918, was 11,753,910.

¹⁴ No census was made as of December 1923, which estimate would have been considered as of January 1924 in this table as explained in the general note, so the figure for October, 1923, has been used.

¹⁵ Unofficial.

¹⁶ Goats included.

Division of Statistical and Historical Research. Compiled from reports of the Bureau of the Census.

¹ In addition 795,519 sheep, lambs, goats, and kids were slaughtered for others in 1914 and 269,128 in 1919. No corresponding data for 1909, 1921, or 1923.

² No data collected by Bureau of the Census for 1914, 1921, or 1923 on farm or retail slaughter.

³ No data obtainable for retail slaughter in 1919.

⁴ Included in "all other States."

Sheep on farms, Jan. 1.....	Thousands..						

Division of Statistical and Historical Research. Inspected slaughter from reports of Bureau of Animal Industry. Weights and storage holdings from reports of the Cold Storage Report Section; receipts, shipments, and prices compiled from data of the reporting service of the Division of Livestock, Meats, and Wool, and number on farm from Division of Crop and Livestock Estimates. Exports and imports from Bureau of Foreign and Domestic Commerce.

¹ Weighted average, not total.

² Simple average, not total.

³ Including reexports.

⁴ At public stockyards.

Division of Livestock, Meats, and Wool. Production figures 1910–1913 from the National Association of Wool Manufacturers; 1914–1925 from the Division of Crop and Livestock Estimates; imports and exports from the Bureau of Foreign and Domestic Commerce.

¹ Imports and reexports include hair of camel, goat, alpaca, etc. Imports of hair not separately stated prior to July 1, 1913; since that date it has constituted less than 2 per cent of the total every year except 1915, when it was 2.4 per cent.

² Exports for fiscal years ending June 30 of the years shown.

³ Included in all other articles.

⁴ No transactions.

Division of Statistical and Historical Research. Official sources except where otherwise noted. "Wools" in this table includes washed, unwashed, scoured, pulled wool, slipe, and all other animal fibers included in the United States classification of wool. The following items have been considered as not within this classification: Carded, combed, dyed wool, fleeces; sheep, lamb, and goatskins with hair on, mill waste, noils, and tops.

1 Year beginning July 1.

2 International Institute of Agriculture.

3 Four-year average.

4 Twelve months' sea-trade, three months' land-trade

5 Three-year average.

6 Six months.

7 One year only.

Division of Statistical and Historical Research. Sources: Australia.—1909–1913 average production calendar years 1909–1911, and years ended June 30, 1913 and 1914. Years 1923 and 1924, Quarterly Summary Australian Statistics September, 1925. Year 1925, see note 1. Argentina.—1909–1913 exports plus estimated local consumption as taken from letter from Consul General W. Henry Robertson, Buenos Aires, Aug. 19, 1919, quoting La Prensa Aug. 18, 1919. Year 1923, Argentine Ministry of Agriculture, Mar. 30, 1924. Year 1924, see note 2. Year 1925, see note 3. New Zealand.—Years 1909–1913, 1923, and 1924, Dalgrey & Co. Year 1925, see note 4. United States.—Division of Crop and Livestock Estimates, Union of South Africa.—Average, 1909–1913. Exports, Sept. 1 to Aug. 30, 1909–1910 to 1913–1914. Years 1923 and 1924, exports, Sept. 1 to Aug. 30. Year 1925, see note 5. United Kingdom.—Average, 1909–1913, calendar years. Year 1923, Yorkshire Observer Trade Review, 1924. Year 1924, estimate of Minister of Agriculture in letter from assistant trade commissioner Jan. 6, 1925, page 3. Year 1925, Yorkshire Observer, January. Average 1909–1913 and 1922 exports. Year 1924, Comercio Reports, Sept. 7, 1925. Year 1925, Acting Commercial Attaché Lew B. Clark, Montevideo, Oct. 12, 1925, page 7. This estimate may be exceeded according to information received from Consul U. Grant Smith, Dec. 17, 1925. It may reach 125,000,000 pounds.

¹ Based on increase in receipts of Australian wool into store from Oct. 1 to Dec. 31, 1925, compared with preceding year and information furnished by Trade Commissioner Babbitt as to the weight per bale. This estimate may be too high as information from other sources state that it is not thought that last year's figures will be exceeded to any extent.

² Estimate based on 12 months exports October–September, stocks of unshipped wool on hand Sept. 24, 1925 and estimated home consumption.

³ Estimated from information furnished by Commercial Attaché Peely stating that clip was about the same as last year.

⁴ Estimate of Government statistician quoted by Vice Consul J. C. Hudson, Wellington, Feb. 2, 1926. The vice consul states that this is a little too high and is more likely to be 30,000,000 to 35,000,000 pounds less than last year.

⁵ Estimate based on estimated increase over preceding year.

Division of Statistical and Historical Research. From the Yorkshire Observer "Trade Review" of 1922 for 1909-1922; subsequently from annual issues of that publication. Converted at par prior to 1912, after 1911, converted to cents per pound on the basis of the monthly average rate of exchange as given in Federal Reserve Bulletin.

¹ First shorn fleece, but not lambs' wool.

² Period of price control. Approximate issue prices: 1917, 50 cts.; 1918, 55 cts.; 1919, 45 1/8 cts.

³ Includes all fleeces shorn after the first.

Division of Statistical and Historical Research. Compiled from reports of the Cold Storage Report Section.

¹ Based on reports from about 750 packers and slaughterers, whose slaughterings equaled nearly 85 per cent of total slaughter under Federal inspection.

² Unrendered.

Division of Crop and Livestock Estimates.

¹ Number of horses and mules on Jan. 1 and number of colts born during preceding year on farms of about 80,000 crop reporters.

² 1910 census of all horses and mules adjusted to Jan. 1, basis with colts born during 1909.

³ 1920 census of all horses and mules Jan. 1 with colts under 1 year Jan. 1.

⁴ 1925 census of all horses and mules Jan. 1 with colts under 2 years Jan. 1, divided by 2 to approximate

Division of Statistical and Historical Research. Compiled from Monthly Summary of Foreign Commerce of the United States, June, 1925.

¹¹ Jan. 1-June 30.

¹² Included with Vegetable products, "Other, n. e. s."

¹³ July 1-Dec. 31.

¹⁴ Reported in value only.

¹⁵ Classified as Railroad ties, "Softwood."

¹⁶ Classified as Timber, sawed, Douglas fir, "Treated," and "Untreated."

¹⁷ Classified as Timber, sawed, "Douglas fir."

¹⁸ Classified as Timber, sawed, Southern yellow pine, "Treated," and "Untreated."

¹⁹ Classified as Timber, sawed, "Southern yellow pine."

²⁰ Classified as Miscellaneous forest products, "Veneers" and "Plywood."

²¹ Includes "Alcohols" or "Other alcohols, pure and denatured," and "Methanol, pure and denatured."

Division of Statistical and Historical Research. Compiled from Foreign Commerce and Navigation of the United States, 1909–1918, and Monthly Summary of Foreign Commerce of the United States, June issues, 1920–1925. All values are gold.

¹Not including forest products.

²Preliminary.

FARM MANAGEMENT AND COSTS STATISTICS

TABLE 652.—Farm business surveys: Summaries of 71,515 farm records from 435 localities in 45 States, 1907-1924

This table presents some results, in terms of averages per farm, from most of the farm business surveys and farm account books kept by farmers that have been made in the United States from 1907 to 1924. It includes essentially all the leading types of farming. The studies were made either singly or cooperatively in some form by the United States Department of Agriculture, and the agricultural colleges and experiment stations.

EXPLANATION OF TERMS

Capital.—The value of all real estate, machinery, livestock, and other property used to carry on the year's business. It includes the value of the farm dwelling, but not of the household furnishings.

Receipts.—Proceeds from the sale of crops produced during the farm year, the increase from livestock, and the receipts from work off the farm, rent of buildings, etc. The increase from stock is found by subtracting the sum of the amount paid for stock purchases and the inventory value at the beginning of the year from the sum of the receipts from livestock products, sales of livestock, and the inventory value at the end of the year. Receipts do not include the family living from the farm.

Expenses.—Annual expenditures made in carrying on the farm business. They include depreciation on buildings and equipment, and the unpaid labor performed by members of the farm family, but do not include the farmer's own labor or any household and personal expenses.

Farm income.—The difference between receipts and expenses. It does not include the family living from the farm.

Labor income.—Farm income less 5 per cent interest charge for the use of the capital. It does not include the family living from the farm. In some of the studies, as originally published, other rates of interest were used.

Return to capital.—The rate returned to the capital after the farmer's labor is deducted from the farm income.

Labor income represents what the farm has earned from the year's business for the labor and management of the farmer after a charge of 5 per cent has been deducted for the use of the capital, while return to capital represents what the farm has earned from the year's business for the capital used after a charge has been deducted for the labor and management of the farmer.

Family living from the farm.—The food products set aside from the year's production, and the fuel, and house rent furnished by the farm for the living of the farm family. This is in addition to receipts, farm income, and labor income.

Farmer's labor.—An allowance for the farmer's own labor and management at the rate he would have to pay another man to take his place. It does not include the family living from the farm.

Other unpaid family labor.—The unpaid family labor other than the labor of the farmer himself determined on the basis of what it would cost to have the same work done by hired labor, or on the amount of additional labor that would need to be hired to carry on the same sized business if the family labor had not been available.

Principal sources of receipts.—These are named in order of importance and in most instances, include all those amounting to 3 per cent or more of the total receipts. Under this heading cotton includes sales of cottonseed; poultry includes sales of eggs; sheep includes lambs and wool; horses includes mules and colts; work off the farm includes man, man and team, and machine work; wood lot includes sales of timber, lumber, posts, firewood, etc. Cattle does not include sales of dairy products.

Division of Crop and Livestock Estimates.

Value per acre obtained by dividing the value of the total gross pounds of lint by the harvested acreage of cotton. This does not include the value of the cottonseed.

Cost of Production Division. From returns to mail inquiry sent to crop reporters.

¹ Includes miscellaneous labor, irrigating and water.

² Sacks and twine, crop insurance, use of implements, use of storage buildings, and overhead.

³ The total includes 91 records from the following States in which there were not enough reports to show State averages: Maine, New Hampshire, Massachusetts, Rhode Island, Utah, Washington, and California.

Cost of Production Division. From returns to mail inquiry sent to crop reporters.

¹ Includes miscellaneous labor, irrigating and water, seed treatment and material.

² Seeds and twine, crop insurance, use of implements, use of storage buildings, and overhead.

³ The total includes 66 records from the following States in which there were not enough reports to show State averages: New Hampshire, Massachusetts, Connecticut, Florida, Louisiana, New Mexico, Arizona, and California.

Return to all unpaid labor.....	600	514	360	241	220	335	170	441	400	372	240	422	235	435
Return to operator (operator's share) ⁴	470	448	230	216	158	279	115	217	245	473	205	372	194	313
Return to operator (family labor at hired labor rates) ⁵	390	396	117	152	27	178	47.2	39	134	483	94	308	71	215

Division of Farm Management and Costs. Computed from reports of owner operators (16,183 in 1923 and 15,103 in 1924) and other information. In computing this table certain arbitrary assumptions are explicitly or implicitly made.

¹ Averages of estimates made by 15,025 farmers for 1923; by 13,753 farmers for 1924.

² Averages of estimates made by 11,832 farmers for 1923; by 12,133 farmers for 1924.

³ Based on the reported value of farm property Jan. 1.

⁴ Many recall paying more than 6 per cent.

⁵ Assumes that all unpaid family labor shared the reduced amount according to the amount of its claim established: (1) For the operator, as 12 times the monthly wages of hired help without board, and (2) for the rest of the family the difference between operator's lot or so figured and the reported value of unpaid labor.

⁶ The assumption is that the operator bears all the burden of failure to earn common hired labor wages, and attributes such wages to his family before computing his remainder or wages.

Division of Crop and Livestock Estimates. Estimated total acreage of 19 crops—corn, wheat, oats, barley, rye, buckwheat, potatoes, sweet potatoes, tobacco, flax, rice, all hay, cotton, peanuts, kafirs, beans, broomcorn, hops, and cranberries.

¹ Based on census proportions in 1919.

² Not including cotton grown in Lower California, Mexico.

TABLE 691.—*Index numbers of the mass of crop production*

Division of Crop and Livestock Estimates.

¹ Does not include nursery or greenhouse products or forest products of the farm.² The crops included are corn, wheat, oats, barley, rye, buckwheat, flaxseed, rice, potatoes, sweet potatoes, all hay, tobacco, lint cotton, beans, broomcorn, grain sorghums, hops, oranges, cloverseed, peanuts, cranberries, and apples.³ Based upon the relation of the value of all crops to that of the 22 crops shown by the census in 1919.

¹ The sales statistics for 1921 relate exclusively to complete machines and were compiled almost wholly from returns made by 427 establishments classified in the "agricultural implements" industry. No sales data were collected for that year from establishments manufacturing gas tractors, horse-drawn vehicles, barn equipment, and miscellaneous farm equipment.

Division of Statistical and Historical Research. Data for 1920 compiled from reports of the Bureau of Public Roads. Data for 1921-1924 compiled from reports of the Bureau of the Census.

¹ The sales statistics for 1921 relate exclusively to complete machines and were compiled almost wholly from returns made by 427 establishments classified in the "agricultural implements" industry. No sales data were collected for that year from establishments manufacturing gas tractors, horse-drawn vehicles, barn equipment, and miscellaneous farm equipment.

² Figures for 1921 relate to barn equipment only. No data for 1920.

Division of Land Economics. Compiled from the Census reports; 1924 figures preliminary.

¹ Acreage of harvested crops for 1919 is the total of the individual crops with allowance for duplication of corn for forage with corn for grain; for 1924 the figures are the results of a direct census inquiry.

² Less than one acre.

Division of Farm Population and Rural Life. Compiled from reports of Bureau of the Census.

¹ Definition of farm population as used in these tables: (1) All persons living on farms, without regard to occupation; (2) all those farm laborers (and their families) who, while not living on farms, nevertheless live in strictly rural territory, outside the limits of any incorporated place.² Definition of rural population: All persons other than those who are urban.³ Definition of urban population: All persons living in places of 2,500 population and more.⁴ Less than one-tenth of 1 per cent.TABLE 720.—*Farm population and other population, summary, United States, 1920*

Item	Number	Percentage of total population
Farm population.....	31,614,269	29.9
Farm population in rural territory.....	31,358,640	29.66
Farm population in urban territory.....	255,629	.24
In cities and other incorporated places of 25,000 and over.....	52,955	.05
In cities and other incorporated places of 10,000 to 25,000.....	36,131	.03
In cities and other incorporated places of 2,500 to 10,000.....	166,543	.16
Rural population.....	51,406,017	48.6
In incorporated places of less than 2,500 inhabitants.....	8,969,241	8.5
In unincorporated territory.....	42,436,776	40.1
Urban population (living in cities and other incorporated places of 2,500 inhabitants and over).....	54,304,603	51.4
Total population.....	105,710,620	100.0

Division of Farm Population and Rural Life. Compiled from Bureau of the Census reports.

Division of Statistical and Historical Research.

Compiled from rates furnished by the Interstate Commerce Commission.

¹ One point of origin, within each crop-reporting district, was chosen as representative for that district.

² State average rates are weighted by the 1919 acreages for each crop-reporting district.

TABLE 729.—Wheat: Comparative freight rates to Liverpool from producing regions in the United States, Canada, Argentina, Australia, and India, 1925

Producing region and route	Rate per bushel ¹	Producing region and route	Rate per bushel ¹
Summary, by countries:		Canada:	
United States—		1. Average rate from wheat area to Port Arthur ²	<i>Cents</i> 13.4
Spring wheat via Lakes and New York.....	36.9	2. Port Arthur to Montreal (all water) ³	9.0
Winter wheat via Chicago, Lakes and New York.....	40.1	3. Montreal to Liverpool ⁴	10.7
Wichita, Kans., via Gulf.....	37.5	Total.....	33.1
Canada via Lakes and Montreal.....	33.1		
Argentina.....	26.6	1. Average rate from wheat area to Port Arthur ²	13.4
Australia.....	31.3	2. Port Arthur to Georgian Bay ⁵	3.4
India.....	34.7	3. Georgian Bay to Montreal (rail) ⁶	8.6
		4. Montreal to Liverpool ⁴	10.7
United States:		Total.....	36.1
Spring wheat region—		Argentina:	
1. Average rate to Duluth ⁷	16.0	1. Average freight rate to Rosario ¹⁰	11.3
2. Duluth to Buffalo (via Lakes) ⁸	2.7	2. Average rate Rosario to Liverpool ⁴	15.3
3. Buffalo to New York (rail) ⁴	9.1	Total.....	26.6
4. New York to Liverpool ⁴	9.1		
Total.....	36.9	Australia:	
Winter wheat region—		1. Average rate to seaport ¹¹	8.0
1. Average Kansas rate to Kansas City ⁹	9.6	2. Average ocean rate to Liverpool ⁴	23.3
2. Kansas City to Chicago ⁴	10.5	Total.....	31.3
3. Chicago to Buffalo (Lake) ⁷	1.8		
4. Buffalo to New York ⁴	9.1	India:	
5. New York to Liverpool ⁴	9.1	1. Average rate to Karachi ¹²	20.1
6. Chicago to New York (all rail) 13.5 ¹	13.5	2. Karachi to Liverpool ⁴	14.6
Total.....	40.1	Total.....	34.7
1. Wichita, Kans., to Galveston ⁴	26.4		
2. Galveston to Liverpool ⁴	11.1		
Total.....	37.5

Division of Statistical and Historical Research.

^a International Yearbook of Agricultural Statistics, 1921, pages 504 and 498. Federal Reserve Bulletin, July, 1921, to date. Sight drafts 1912-1920; cables 1921 to date.^b Federal Reserve Board Bulletin, quoting Statistisk Aarbog, July, 1914, to December, 1919, and their own monthly averages since January, 1920. Quotations at New York on Copenhagen are not available throughout the period, but the shift in sources does not result in any considerable discrepancy. For the calendar year 1920, for example, the Copenhagen quotations on New York show the krone as equivalent to 15.43 cents while the New York quotations on Copenhagen average 15.63 cents per krone.

Bureau of Public Roads.

The disbursements shown above, in general, cover money spent on State roads; in some States county-road work is supervised by State highway department.

- 1 On retirements and sinking funds.
- 2 Includes repairs, rentals, and purchases.
- 3 Includes reimbursements to counties, towns, etc., purchases of right of way and traffic control (policing and signs).
- 4 Consists of \$400,000 to counties and \$38,187 for purchase of right of way.
- 5 On primary road bonds issued by counties.
- 6 On primary road bonds issued by counties.

Bureau of Public Roads.

Above data are partly estimates and approximations, but are only available figures obtainable by this bureau.

‡ Bond interest often included with payments on principal.

§ Estimate based on 1923 data.

¶ Estimated from 1924 road program.

* Estimated from mileage built.

† In only a few States are balances dependable. The figures in parentheses are apparent deficits and the total is a net unexpended balance.

‡ Made up from detailed data and nondetailed estimates.

† Only 20 States show county overhead expenses.

TABLE 755.—Sources and amounts of State and State-controlled funds for highways, 1924

State	Fiscal year ends	Balance at beginning of year	Percent- age of total funds	Total income during year	Percent- age of total funds	State highway bonds, notes, etc., sold	Percent- age of total funds	State tax levied for highways, etc.	Percent- age of total funds	Appropriation by State for highways	Percent- age of total funds

Bureau of Public Roads. Above funds, generally, cover money applied to financing State roads; in some States county road work is supervised by State highway department.

- 1 Gasoline tax, all to county for road maintenance, \$1.635/924.
 2 Used to retire State highway bond issues.
 3 Gasoline tax includes \$126,326 from inspection fees of one-eighth cent per gallon.
 4 No gasoline tax in 1924.
 5 Includes \$1,119,542 from inheritance taxes.
 6 Includes over \$2,000,000 of 1923 collections.
 7 For county roads.
 8 Receipts from county bond sales for trunk highway fund included among funds transferred from counties.
 9 Includes \$42,120 from Federal Government for oil royalties.
 10 Motor vehicle funds to counties.
 11 All tax collected to State general fund.
 12 Expended by counties under regulation of State highway commission.
 13 Excludes market road and forest-aid road income.
 14 Gasoline tax receipts distribution, 25 per cent to county roads and 75 per cent to State general fund.
 15 Includes transfer of \$160,000 from bond interest and sinking fund.
 16 Receipts for 13 months, July 1, 1922, to Sept. 30, 1924.
 17 Includes \$1,526,698 from oil royalties (Federal mineral leasing act).

Bureau of Public Roads.

Above data are partly estimates and approximations, but are the only available figures obtainable by this bureau.

¹ Estimates based on 1923 data.

² Estimated from 1924 road program.

³ Estimated from mileage built.

⁴ Made up from detailed data and nondetailed estimates.

⁵ This balance is probably understated, as most counties do not record balances or deficits. The balances being added to general fund and the deficits being covered from same fund.

Bureau of Public Roads.

¹ In some cases the distribution in amounts and percentages do not balance. Cost of collection and refunds for gasoline used for other purposes than for motor vehicles may account for the differences in some States.

² Data given cover calendar years, except for the following States, where fiscal years end as shown: California, Jan. 31; Connecticut, June 30; Mississippi, South Carolina, Utah, and Vermont, November 30.

³ Balance.

⁴ To date in 1925, these States enacted new gasoline tax rates effective as follows: Kansas, 2 cents (May 1); Michigan, 2 cents (Feb. 16); North Carolina, 4 cents (Mar. 5); Tennessee, 3 cents (Feb. 9); Wyoming, 2½ cents (March).

⁵ This percentage became effective when the tax rate changed as shown here.

⁶ Approximate.

Bureau of Public Roads.

1 Net number of cars and trucks shown when possible, excluding reregistrations and nonresident registrations. Federal, State, or other Government-owned cars and trucks, not registered and not paying licenses, are also excluded in grand totals, unless noted.

2 Recorded in private cars and trucks.

3 Not separately recorded.

4 "Motor trucks" includes solid and pneumatic types, also taxis, busses, etc.

5 Included with private passenger cars.

6 Reregistrations included, but nonresident excluded.

7 Approximate.

8 City cars excluded.

9 State-owned cars only.

10 First six months of registration year only.

11 Excludes cost of motor registration department.

12 To be expended by counties under general regulation made by State highway department.

13 Includes nonresident registrations.

Forest Service. Compiled from report on Senate Resolution 311 and "Forest Resources of the World."

¹ Alaskan areas are not tabulated because so little is known of the interior forests that the best estimates are only approximations. The figures now commonly used indicate 65,000,000 acres of coniferous forest and 5,000,000 acres of hardwoods. The bulk of the merchantable timber is confined to a belt along the coast of the southeastern part of the Territory, containing approximately 5,000,000 acres of forest.

² The areas given in this table refer only to land capable of producing saw timber or pulp timber in commercial quantities, and do not include the open woodland and chaparral of the Southwest.

³ New England: Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island.

⁴ Middle Atlantic: New York, Pennsylvania, New Jersey, Delaware, Maryland, District of Columbia.

⁵ Lake: Michigan, Wisconsin, Minnesota.

⁶ Central: Ohio, Indiana, Illinois, Iowa, West Virginia, Kentucky, Missouri, Tennessee.

⁷ South Atlantic and East Gulf: Virginia, North Carolina, South Carolina, Georgia, Alabama, Florida.

⁸ Lower Mississippi Valley: Mississippi, Louisiana, Arkansas, Texas, Oklahoma.

⁹ Rocky Mountain: Montana, Idaho, Wyoming, Nevada, Utah, Colorado, Arizona, New Mexico.

¹⁰ Pacific: Oregon, Washington, California.

Forest Service.¹ Few, if any, of the public forests are entirely covered with saw timber.² Net area as of June 30, 1925. These figures do not, of course, include the forested land within Indian reservations, national parks, national monuments, some military reservations, and the unreserved public domain.³ Mostly marsh, game preserves, and public shooting grounds.⁴ Of this, 77,000 acres is State swamp land.⁵ Described as "forest and park" land.⁶ Practically all villages and cities have forested areas or parks for recreation.⁷ Net area as of Dec. 31, 1924.

¹ Woodland comprises all farm woodlots, natural or planted, and cutover land with young growth. It excludes lands covered with chaparral or woody shrubs.

² Timberland is that part of the total forested area on farms which is covered with trees mostly of saw-log sizes.

³ See South Dakota.

⁴ Figures for Dakota Territory.

Forest Service

¹ It is impossible to obtain accurate figures for areas planted by agencies other than the Federal Government or the States. The best estimates have been used. They came from State foresters, State colleges, and agricultural experiment stations, and from reliable local sources.

² Considerable planting in Michigan of which there is no record.

TABLE 770.—National forests: Fires: Number by location, causes, and classification, by cost of suppression and damage, 1925

State and district	Year	Location of origin of fires				Causes of fires										Classification of fires according to cost of suppression and resources damaged

Forest Service.

1. Classified as "unknown."

2. For certain items the average is for a four-year period rather than the full time.

TABLE 77.1.—Forest fires: Number by causes, United States, 1924

Group and State	Year	Number of fires, by causes									
		Lightning	Railroads	Camp fires	Smokers	Brush burning	Incendiary	Lumbering	Miscellaneous	Unknown	Total
United States	1916	3,434	4,599	3,951		6,623	6,112	2,764	2,191	11,329	41,003

									100.00

Forest Service. Averages of recent years.

¹ Based on values of approximately 1919, milled products at the mill, fuel at point of production, all others at point of consumption except exports (declared valuation). These figures express mainly that part of the damage done by fire which can be readily stated in dollars, namely, the loss of merchantable timber. Other damages suffered are the loss of young growth and forage, the injury of trees, resulting in admitting the inroads of insects and disease, the deterioration of forest types resulting from the decrease of valuable species which are sensitive to fire, accelerated run-off followed by soil erosion and irregular stream flow, destruction of animals, fish, and birds, and the prevention of recreational uses. One of the most menacing features of the present forest situation is the lowered productivity of forest soils, sometimes amounting to absolute sterility, which results from the action of fires.

Forest Service. Compiled from Bureau of the Census reports.

Regions.—Northeastern: Connecticut, Delaware, District of Columbia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont.

Central: Illinois, Indiana, Kentucky, Missouri, Ohio, Tennessee, West Virginia.

Southern: Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, Oklahoma, Texas.

North Carolina pine: North Carolina, South Carolina, Virginia.

Lake: Michigan, Minnesota, Wisconsin.

North Pacific: Oregon, Washington.

South Pacific: California, Nevada.

North Rocky Mountain: Idaho, Montana.

South Rocky Mountain: Arizona, Colorado, New Mexico, Utah, Wyoming.

Prairie: Iowa, Kansas, Nebraska, North Dakota, South Dakota.

¹² Includes "All other."

Forest Service and Census bulletins.

1 Includes western pine, white pine, and lodgepole pine.

2 Included with southern pine.

3 Included with eastern larch.

4 Includes 148,160 square crossties.

5 Includes 373,387 white pine crossties.

6 Steam railroads only.

TABLE 779.—Veneers: Wood consumed in manufacture, by kinds, 1905-1911, 1919, 1921, 1923

1516 Yearbook of the Department of Agriculture, 1925

	Page
<i>Asclepias subulata</i> , possibilities in rubber production.....	52
Asparagus —	
breeding—	
by department.....	447-448
for disease resistance.....	529
canning industry.....	445, 608, 611
origin, production, etc.....	446-448, 888, 890
rust resistance and losses.....	447-448
seed production.....	329
yield.....	448
<i>Aspergillus</i> , study by department scientists.....	74
Aspirator, invention for cleaning grain.....	43
Auctions, fruits and vegetables.....	657-658
Automobile, exhaust gas, use against rats, etc.....	596-597
Avocados, origin, production, etc.....	240, 252-253
Bacon —	
exports—	
by countries, 1910-1925.....	1142
by months, 1910-1926.....	1141
prices—	
in England, 1909-1925.....	1146
wholesale and retail.....	1135
BAGNOLL, LT. RICHARD, discovery of sweet corn.....	413
Bananas —	
imports and exports.....	604, 697, 698
origin, production, etc.....	255-256
Bancroft, note on tomato.....	414
Bankruptcy, farmers', statistics.....	1386
Barberry—	
eradication, investigation results.....	55-56
Japanese, harmless.....	56
Barium carbonate, use against rats.....	596
Barley —	
acreage, value, etc. by periods, by States and by countries.....	821-822, 824-825
exports, prices, etc. by periods and by countries.....	821, 829, 830-831
imports, by periods.....	829
marketing, prices, markets, etc.....	823, 827-831
prices—	
by periods, by States and countries.....	821, 823-825, 830-831
on farm.....	830
production—	
world, 1909-1925.....	827
yields, etc. by periods, by States and by countries.....	821-823, 824-827
receipts at principal markets.....	828
reduction of yield with causes.....	821
statistics.....	821-831
stocks, supplies, receipts, etc.....	827-828
trade international by periods.....	829
value per acre, by States, 1909-1925.....	1317-1318
weight per bushel.....	1364
Bean —	
beetle, Mexican, spread, etc.....	556-557
weevil, control in California.....	66
Beans —	
baked, canning industry.....	613
breeding for disease resistance.....	529-532
climatic requirements.....	399

	Page
Beans—Continued.	
dry—	
acreage, etc., 1919, 1924, 1925.....	400
production and marketing.....	401, 947-948
green—	
acreage, etc., 1924, 1925.....	401
cultural methods.....	402
